WEATHER CONDITIONS ARE STILL A DRAWBACK

Jobbers Feel That Spring Trade Is Now Gone and Concentrate Their Efforts on Fall Business.

New York, May 20.—Bradstreet's to-morrow will say: Weather conditions are still the apparent drawback in the trade and crop situation. Temperatures have been too cold to allow of free distribution of spring and summer goods or to permit of the usual retail trade. The situation is now one of stagnation, though permitting good progress in selling in various sections of the country. In jobbing circles the feeling is that the spring trade is past and gone, and efforts are now concentrated on the fall business. Reports as to wheat are fairly good, though not equal to a year ago.

Some faint evidence of improvement are to be noted, particularly in the wool and leather industries, and in wool at Western primary markets, but against these are to be noted further weakness in iron, rather more quietness in lumber and talk of further curtailment in cotton mill production.

The industrial situation is rather quiet, but the most serious strike of the year, that of masters and pupils of lake vessels, continues, and is now at Western primary markets, but against these are to be noted further weakness in iron, rather more quietness in lumber and talk of further curtailment in cotton mill production.

There is a reported drop in hides this week, and a further advance in wool. Perhaps the most pronounced weakness shown by various commodities is in iron. Among the finished products, bar iron shows at the West, though reports hold steady at the East. The present feeling is that iron production is large, considering the demand, and that the market is not so strong as it was last year.

Prospects for the Future Are Improved Somewhat by the Progress Made in Agriculture.

New York, May 20.—R. G. Dun & Co.'s weekly review of trade to-morrow will say: Reports of increased trade are received from a few favored points, but the nation, as a whole, has not improved its commercial position during the past week, in so far as current conditions of trade are concerned. The distribution of merchandise or manufacturing activities are concerned. Prospects for the future have improved somewhat, however, on account of the progress made in agriculture. Unless the crop suffer an unusual setback, however, it should be a good year for the farmers and all other industries will feel the stimulus. Lake traffic is seriously interrupted by the strike, but otherwise the labor situation is not alarming. Leading branches of manufactures are extremely quiet, the recent slight gain in iron and steel having disappeared, and transporting interests are not equaling last year's activity. Railway earnings thus far available for May showing a decrease of 4.4 per cent.

Although quotations of iron and steel products have yielded little, the industry is not making much headway. It is a question of price, as there are no reports of business offered on lower levels than a few weeks ago. Railway earnings show a decrease of 4.4 per cent. Unless the crop suffer an unusual setback, however, it should be a good year for the farmers and all other industries will feel the stimulus.

Although railway equipment is in need of general replacement, owing to the severe weather, there is some conservatism by purchasers, owing to the absolute necessity of dependent mills have made some concrete plans in the short market, while there is no price in the short market. Improvement in the steel industry should appear very soon if work is begun as planned on several large bridge contracts. The demand for structural steel is very strong. Foreign trade shows some improvement, but the month's production will be very heavy.
